

This map illustrates the connection between overdose deaths and enforcement operations conducted by the DEA between August 3, 2021 and September 28, 2021. The yellow areas indicate where drug overdose deaths occurred during this period. The red pin mark locations indicate where DEA conducted enforcement actions. The resulting historic seizure amounts included deadly fentanyl-laced pills. DEA is strategic in focusing our enforcement efforts in the communities where drug trafficking networks are causing the greatest harm. Map courtesy of Baltimore/Washington HIDTA.
