Emoji Drug Code DECODED

Do you know the warning behind certain emojis? Emojis were originally designed to represent an emotion, event, or activity, but have recently taken on a life of their own. Criminal organizations, including drug traffickers, have noticed and are using emojis to buy and sell counterfeit pills and other illicit drugs on social media and through e-commerce. This reference guide is intended to give parents, caregivers, and influencers a better sense of how the language is being used in conjunction with illegal drugs. It is important to note that this list is not exhaustive and the images contained therein are representative examples. Emojis, on their own, should not be indicative of illegal activity, but coupled with a change in behavior or change in appearance or significant change in behavior should be a means to start an important conversation. We understand breaking down these concepts can be difficult so we have resources available at DEA.gov/emoji.
